

(a) Validity, linear QR
 $n = 2048$

(b) Exact weighted, pinball MLP
 $n = 8192$

(c) Training-size effect
 $m = 4096, \kappa = 3$

— exact weighted $\circ$ $\kappa = 1$
— population-normalized $\square$ $\kappa = 3$
— unweighted nominal $1 - \alpha$

$\circ$ coverage L^2
 $\square$ length L^2
.... $m^{-1/2}$ reference

— $\kappa = 1$
— $\kappa = 3$

— pinball MLP $\circ$ coverage L^2
— linear QR $\square$ length L^2
